

Ch 34 Definitions

Immunity _____

Complement _____

Innate immunity _____

Adaptive immunity _____

Normal flora _____

Antigen _____

Antibody _____

Inflammation _____

Leukocytes (White Blood Cells – WBC)

Function – defense against diseases. They form a mobile army that helps protect the body from damage by bacteria, viruses, parasites, toxins, and tumor cells.

PHIL eats grains (neutrophils, eosinophils, basophils) – have granules (grains) containing cytokines, destructive enzymes, toxins, and signaling molecules.

No grains in sight (cyte) – monocytes, lymphocytes.

Lineup of WBC (from most common to least common)
