

### Dihybrid Cross Example

In cocker spaniels, black coat color ( $B$ ) is dominant over red ( $b$ ), and solid color ( $C$ ) is dominant over spotted ( $c$ ). If two dihybrids ( $BbCc$ ) were crossed, the most common phenotype would be

- a. black and solid.
- b. black and spotted.
- c. red and solid.
- d. red and spotted.
- e. none of these
